Exercise 1.4

I choose the library system case

Entities: book, member, borrowing, and staff

1. Buat ERD untuk sistem perpustakaan dengan entitas Buku, Anggota, Peminjaman, Petugas
2. Tentukan atribut, primary key, relasi antar entitas, dan gambarkan dalam diagram

The diagram has contained the attribute, primary key, relations between entities.

3. Identifikasi entitas lemah dan relasi many-to-many jika ada

Weak Entities -> I think it is the borrowing entities because it can be set as a relation between the entities of member and the staff because the member can directly borrow the book from the staff.

Many-to-many relationships:

- Member to staff
- Member to book
