

Database Practicum

WEEK 9 ASSIGNMENT

Farrel Tsaqif Anindyo
24/536735/PA/22769

I. Student Activity

1. Tuliskan suatu prosedur tersimpan untuk menaikkan harga kategori produk tertentu dengan persentase tertentu. Anda perlu membuat tabel product dengan data yang sesuai untuk menguji prosedur Anda. Sebagai alternatif, load database ClassicModels pada mesin pribadi Anda sehingga Anda memiliki akses lengkap untuk database tersebut. Anda perlu mengubah DELIMITER sebelumnya untuk membuat prosedur tersimpan.

```
MariaDB [classicmodels]> DELIMITER //
MariaDB [classicmodels]> CREATE PROCEDURE PriceUpbyProduct (IN productName VARCHAR(255), IN percent DECIMAL(5,2))
-> TE products
SET BEGIN
-> UPDATE products
-> SET buyPrice = buyprice * (1 + percent / 100)
-> WHERE productName = productName;
-> END //
Query OK, 0 rows affected (0.143 sec)

MariaDB [classicmodels]> DELIMITER;

MariaDB [classicmodels]> call PriceUpbyProduct('1969 Harley Davidson Ultimate Chopper', 10);
Query OK, 110 rows affected, 64 warnings (0.144 sec)
```

2. Tuliskan suatu prosedur tersimpan untuk melaporkan jumlah yang dipesan secara spesifik berdasarkan bulan dan tahun untuk pelanggan yang memiliki string karakter tertentu pada namanya.

```

MariaDB [classicmodels]> DELIMITER $$
MariaDB [classicmodels]>
MariaDB [classicmodels]> CREATE PROCEDURE OrderbyName(
    -> IN nameSubstring VARCHAR(50),
    -> IN monthNumber INT,
    -> IN yearNumber INT
    -> )
    -> BEGIN
    '
c.customerName -> SELECT
    -> c.customerNumber,
    -> c.customerName,
    -> MONTH(o.orderDate) AS orderMonth,
    -> YEAR(o.orderDate) AS orderYear,
    -> SUM(od.quantityOrdered) AS totalQuantityOrdered
    -> FROM customers c
o ON c.customer -> JOIN orders o ON c.customerNumber = o.customerNumber
    -> JOIN orderdetails od ON o.orderNumber = od.orderNumber
    -> WHERE c.customerName LIKE CONCAT('%', nameSubstring, '%')
    -> AND MONTH(o.orderDate) = monthNumber
    -> AND YEAR(o.orderDate) = yearNumber
    -> GROUP BY c.customerNumber, c.customerName, orderMonth, orderYear
    -> ORDER BY totalQuantityOrdered DESC;
    -> END $$
Query OK, 0 rows affected (0.088 sec)

MariaDB [classicmodels]> DELIMITER ;

```

```

MariaDB [classicmodels]> CALL OrderbyName('Online', 1, 2003);
+-----+-----+-----+-----+-----+
| customerNumber | customerName                | orderMonth | orderYear | totalQuantityOrdered |
+-----+-----+-----+-----+-----+
| 363 | Online Diecast Creations Co. | 1 | 2003 | 151 |
+-----+-----+-----+-----+-----+
1 row in set (0.074 sec)

```

3. Tuliskan suatu prosedur tersimpan untuk mengubah credit limit semua pelanggan di negara tertentu dengan persentase tertentu.

```

MariaDB [classicmodels]> DELIMITER $$
MariaDB [classicmodels]>
MariaDB [classicmodels]> CREATE PROCEDURE UpdateCreditLimitbyCountry(
    -> IN countryName VARCHAR(50),
    -> IN percentChange DECIMAL(5,2)
    -> )
    -> BEGIN
    -> UPDATE customers
    -> SET creditLimit = creditLimit * (1 + percentChange / 100)
    -> WHERE country = countryName;
    -> END $$
Query OK, 0 rows affected (0.135 sec)

MariaDB [classicmodels]> DELIMITER ;
MariaDB [classicmodels]> CALL UpdateCreditLimitbyCountry('USA', 10);
Query OK, 35 rows affected (0.096 sec)

```
